Chapters in a book are divided logically with subheads or, in the case of scientific or technical books, with numbered sections. Knowing how to organize these sections both editorially and typographically is necessary for proper book construction. Most nonfiction books are at least divided into chapters. Chapter lengths vary widely, and the goal of trying to keep chapters the same length may be elusive.

A chapter book is a story book intended for intermediate readers, generally age 7-10. Unlike picture books for younger readers, a chapter book tells the story primarily through prose, rather than pictures. Unlike books for older readers, chapter books contain plentiful illustrations. An edited book is a book in which different people have written different chapters, and the chapters have been compiled or put together by an editor. If you used information from just one chapter of an edited book, cite the chapter you used in the reference list. Create separate reference list entries for separate edited book chapters that you used. Fountain, Y. (2019). Physical activity games. In J. Stone & C. E.
