Using Extramural Citations to Assess Economic Scholarship Joshua Angrist, Pierre Azoulay, Glenn Ellison, Ryan Hill, and Susan Feng Lu NBER Working Paper No. 23698 August 2017, Revised August 2017 JEL No. A11,A12,A13,A14,B41,C18. ABSTRACT. A breakdown of extramural citations by economics fields shows broad field impact. Differentiating between theoretical and empirical papers classified using machine learning, we see that much of the rise in economics' extramural influence reflects growth in citations to empirical work. This parallels a growing share of empirical cites within economics. At the same time, the disciplines of computer science and operations research are mostly influenced by economic theory. This paper overviews funding pattern of extramural research supported by Central Government departments/agencies during 5 years period (1995-2000) and then compares it with previous 5 years (1990-95). Analyses are made in terms of pattern of funding by types of institutions, broad subject areas, major scientific agencies and year-wise support. Analysis of these extramural R&D projects gives a good reflection of magnitude of R&D activities in various scientific disciplines within the country. The present paper analyses the extramural R&D projects funded by major central government S&T departments/agencies during the five-year period (1990-95) in terms of pattern of funding by types of institutions and by broad subject areas. Federal grant writing and contracts with an emphasis in technology are a specialty. Extramural R&D is administered mainly by NIFA through appropriation to land-grant universities and the American Food Research Institute (AFRI) - the principal competitive grants program of USDA (\$325M in 2013 " up from \$264M in 2012) (see Figure 2 for historical breakout of grant recipients). Though \$325M falls short of the intended \$500M annual funding rate when AFRI was conceived, steady increases over the past 4 years from the base amount of \$209M allocated in 2009 are encouraging. The Society offers extramural support for research and training via the programs described below. For program-specific information, please see Section 20. GRANT MECHANISMS. Eligibility Current and former ACS grantees with innovative projects who: Have held or currently hold one of these grants (or previous versions of such awards): Research Scholarship Grant (RSG), Mentored Research Scholar Grant (MRSG), Cancer Control Career Development Awards (CCCCA), or Pilot and Exploratory Projects in Palliative Care (PEP) award. Have held one of the above ACS grants for a minimum of one year. These are government grants other than grants related to assets, and are normally available for development or improvements. Such as grant for improvement in working conditions for employees, grant for the creation of job vacancies, and grant for the training of the staff. Forgivable Loans. These are the loans whose repayment has the potential to be waived by the lender under certain prescribed conditions. Recognition of Government Grants. Government grants are only permitted to be recognized when it is reasonably certain that: (a) Grant will be received and (b) The entity will satisfy the prede
