

Cognitive Psychology and Its Implications

Seventh Edition

John R. Anderson

Carnegie Mellon University

Worth Publishers

Contents

Preface	XVII
CHAPTER 1 The Science of Cognition	1
Motivations	1
Intellectual Curiosity	1
Implications for Other Fields	3
Practical Applications	3
The History of Cognitive Psychology	4
Early History	4
Implications: <i>What does cognitive psychology tell us about how to study effectively?</i>	5
Psychology in Germany: Focus on Introspective Observation	6
Psychology in America: Focus on Behavior	7
The Cognitive Revolution: AI, Information Theory, and Linguistics	9
Information-Processing Analyses	10
Cognitive Neuroscience	12
Information Processing: The Communicative Neurons	12
The Neuron	13
Neural Representation of Information	15
Organization of the Brain	17
Localization of Function	20
Topographic Organization	22
Methods in Cognitive Neuroscience	24
Using fMRI to Study Equation Solving	27
CHAPTER 2 Perception	32
Visual Information Processing	32
Visual Perception in the Brain	32
Early Visual Information Processing	34
Information Coding in Visual Cells	37
Perceiving Depth and Surfaces	39
Object Perception	40
Visual Pattern Recognition	42
Template-Matching Models	42
Implications: <i>Separating humans from BOTS</i>	44
Feature Analysis	45
Object Recognition	47
Face Recognition	50

Speech Recognition	51
Feature Analysis of Speech	52
Categorical Perception	53
Context and Pattern Recognition	56
Massaro's FLMP Model for Combination of Context and Feature Information	58
Other Examples of Context and Recognition	58
Conclusions	61
CHAPTER 3 Attention and Performance	63
Serial Bottlenecks	63
Auditory Attention	65
The Filter Theory	66
The Attenuation Theory and the Late-Selection Theory	67
Visual Attention	69
The Neural Basis of Visual Attention	71
Visual Search	73
The Binding Problem	74
Neglect of the Visual Field	76
Object-Based Attention	79
Central Attention: Selecting Lines of Thought to Pursue	81
Implications: <i>Why is cell phone use and driving a dangerous combination?</i>	85
Automaticity: Expertise Through Practice	85
The Stroop Effect	86
Prefrontal Sites of Executive Control	88
Conclusions	90
CHAPTER 4 Mental Imagery	92
Verbal Imagery versus Visual Imagery	93
Visual Imagery	95
Image Scanning	98
Visual Comparison of Magnitudes	99
Are Visual Images Like Visual Perception?	101
Visual Imagery and Brain Areas	102
Imagery Involves Both Spatial and Visual Components	105
Cognitive Maps	106
Egocentric and Allocentric Representations of Space	107
Map Distortions	110
Translating Words to Images	112
Conclusions: Visual Perception and Visual Imagery	113
CHAPTER 5 Representation of Knowledge	115
Knowledge and Regions of the Brain	116
Memory for Meaningful Interpretations of Events	116
Memory for Verbal Information	116
Memory for Visual Information	118

Retention of Detail versus Meaning	120
Implications of Good Memory for Meaning	121
Implications: Mnemonic techniques for remembering vocabulary items	122
Propositional Representations	123
Propositional Networks	125
Amodal versus Perceptual Symbol Systems	127
Embodied Cognition	129
Conceptual Knowledge	131
Semantic Networks	132
Schemas	134
Psychological Reality of Schemas	135
Degree of Category Membership	136
Event Concepts	138
Abstraction versus Exemplar Theories	140
Natural Categories in the Brain	142
Conclusions	144
CHAPTER 6 Human Memory: Encoding and Storage	146
Memory and the Brain	147
Sensory Memory Holds Information Briefly	148
Visual Sensory Memory	148
Auditory Sensory Memory	149
A Theory of Short-Term Memory	150
Working Memory Holds the Information Needed to Perform a Task	152
Baddeley's Theory of Working Memory	152
The Frontal Cortex and Primate Working Memory	154
Activation and on Long-Term Memory	156
An Example of Activation Calculations	156
Spreading Activation	159
Practice and Memory Strength	161
The Power Law of Learning	161
Neural Correlates of the Power Law	163
Factors Influencing Memory	166
Elaborative Processing	166
Techniques for Studying Textual Material	167
Meaningful versus Nonmeaningful Elaborations	169
Implications: How does the method of loci help us organize recall?	170
Incidental versus Intentional Learning	171
Flashbulb Memories	172
Conclusions	174
CHAPTER 7 Human Memory: Retention and Retrieval	176
Are Memories Really Forgotten?	176
The Retention Function	178

How Interference Affects Memory	181
The Fan Effect: Networks of Facts	182
The Interfering Effect of Preexisting Memories	184
The Controversy over Interference and Decay	185
Redundancy Protects Against Interference	186
Retrieval and Inference	187
Plausible Retrieval	188
The Interaction of Elaboration and Inferential Reconstruction	190
Implications: How have advertisers used knowledge of cognitive psychology?	192
Eyewitness Testimony and the False-Memory Controversy	192
False Memories and the Brain	194
Associative Structure and Retrieval	196
The Effects of Encoding Context	196
The Encoding-Specificity Principle	199
The Hippocampal Formation and Amnesia	200
Implicit versus Explicit Memory	202
Implicit versus Explicit Memory in Normal Participants	203
Procedural Memory	205
Conclusions: The Many Varieties of Memory in the Brain	207
CHAPTER 8 Problem Solving	209
The Nature of Problem Solving	210
A Comparative Perspective on Problem Solving	210
The Problem-Solving Process: Problem Space and Search	212
Problem-Solving Operators	215
Acquisition of Operators	215
Analogy and Imitation	218
Analogy and Imitation from an Evolutionary and Brain Perspective	220
Operator Selection	221
The Difference-Reduction Method	222
Means-Ends Analysis	224
The Tower of Hanoi Problem	226
Goal Structures and Prefrontal Cortex	229
Problem Representation	230
The Importance of the Correct Representation	230
Functional Fixedness	231
Set Effects	233
Incubation Effects	236
Insight	237
Conclusions	239
Appendix: Solutions	240

CHAPTER 9 Expertise	242
Brain Changes with Skill Acquisition	243
General Characteristics of Skill Acquisition	244
Three Stages of Skill Acquisition	244
Power-Law Learning	245
The Nature of Expertise	249
Proceduralization	249
Tactical Learning	251
Strategic Learning	252
Problem Perception	255
Pattern Learning and Memory	257
Implications: <i>Computers achieve computer expertise differently than humans</i>	260
Long-Term Memory and Expertise	261
The Role of Deliberate Practice	262
Transfer of Skill	263
Theory of Identical Elements	265
Educational Implications	266
Intelligent Tutoring Systems	267
Conclusions	270
CHAPTER 10 Reasoning	272
Reasoning and the Brain	273
Reasoning about Conditionals	274
Evaluation of Conditional Arguments	276
Evaluating Conditional Arguments in a Larger Context	277
The Wason Selection Task	278
Permission Interpretation of the Conditional	279
Probabilistic Interpretation of the Conditional	281
Final Thoughts on the Connective <i>If</i>	282
Deductive Reasoning: Reasoning about Quantifiers	283
The Categorical Syllogism	283
The Atmosphere Hypothesis	285
Limitations of the Atmosphere Hypothesis	286
Process Explanations	287
Inductive Reasoning and Hypothesis Testing	289
Hypothesis Formation	290
Hypothesis Testing	291
Scientific Discovery	294
Implications: <i>How convincing is a 90% result?</i>	295
Conclusions	296

CHAPTER 11 Judgment and Decision Making	298
The Brain and Decision Making	299
Probabilistic Judgment	300
Bayes's Theorem	300
Base-Rate Neglect	302
Conservatism	304
Correspondence to Bayes's Theorem with Experience	305
Judgments of Probability	307
The Adaptive Nature of the Recognition Heuristic	309
Decision Making	312
Framing Effects	314
Implications: <i>Why are adolescents more likely to make bad decisions?</i>	317
Neural Representation of Subjective Utility and Probability	317
Conclusions	320
 CHAPTER 12 Language Structure	 322
Language and the Brain	322
The Field of Linguistics	324
Productivity and Regularity	324
Linguistic Intuitions	326
Competence versus Performance	327
Syntactic Formalisms	328
Phrase Structure	328
Pause Structure in Speech	329
Speech Errors	330
Transformations	332
What Is So Special about Human Language?	334
Implications: <i>Ape language and the ethics of experimentation</i>	336
The Relation Between Language and Thought	337
The Behaviorist Proposal	337
The Whorfian Hypothesis of Linguistic Determinism	338
Does Language Depend on Thought?	341
Modularity of Language	342
Language Acquisition	343
The Issue of Rules and the Case of Past Tense	346
Quality of Input	348
A Critical Period for Language Acquisition	350
Language Universals	353
The Constraints on Transformations	354
Parameter Setting	355
Conclusions: The Uniqueness of Language: A Summary	356
 CHAPTER 13 Language Comprehension	 358
Brain and Language Comprehension	359
Parsing	360
Constituent Structure	360

Immediacy of Interpretation	362
The Processing of Syntactic Structure	364
Semantic Considerations	366
The Integration of Syntax and Semantics	367
Neural Indicators of Syntactic and Semantic Processing	368
Ambiguity	370
Neural Indicators of the Processing of Transient Ambiguity	371
Lexical Ambiguity	373
Modularity Compared with Interactive Processing	374
Implications: <i>Intelligent chatterboxes</i>	376
Utilization	377
Bridging versus Elaborative Inferences	377
Inference of Reference	379
Pronominal Reference	380
Negatives	381
Text Processing	383
Text Structure and Memory	385
Levels of Representation of a Text	387
Conclusions	388
CHAPTER 14 Individual Differences in Cognition	390
Cognitive Development	391
Piaget's Stages of Development	392
Conservation	393
What Develops?	396
The Empiricist-Nativist Debate	398
Increased Mental Capacity	400
Increased Knowledge	402
Cognition and Aging	404
Summary for Cognitive Development	407
Psychometric Studies of Cognition	408
Intelligence Tests	408
Implications: <i>Does IQ determine success in life?</i>	411
Factor Analysis	411
Reasoning Ability	414
Verbal Ability	416
Spatial Ability	417
Conclusions from Psychometric Studies	420
Conclusions	420
Glossary	422
References	430
Name Index	453
Subject Index	461

@inproceedings{Anderson1980CognitivePA, title={Cognitive Psychology and Its Implications}, author={J. Anderson}, year={1980} }. J. Anderson. Published 1980. Psychology. A fully updated, systematic introduction to the theoretical and experimental foundations of higher mental processes. Avoiding technical jargon, John R. Anderson constructs a coherent picture of human cognition, relating neural functions to mental processes, perception to abstraction, representation to meaning, knowledge to skill, language to thought, and adult cognition to child development. Save to Library. Create Alert. What We're Reading: Cognitive Psychology and Its Implications. A new series to share some of our ongoing learning with you. At Carnegie Learning, we consider ourselves lifelong learners. Every day, we work on continually developing our knowledge in order to make the best possible math solutions for teachers and students. What We're Reading is a new series to share some of that learning with you. Cognitive Psychology and Its Implications, by John R. Anderson Review by John Connelly, Cognitive Scientist at Carnegie Learning. Cognitive Psychology and Its Implications is an overview of the field of Cognitive Psychology and Its Implications Seventh Edition This page intentionally left blank Cognitive Psychology and Its Implications Seventh Edition John R. Anderson Carnegie Mellon University Worth Publishers TO GORDON BOWER Senior Publisher: Catherine Woods Acquisitions Editor: Erik Gilg Marketing Manager: Amy Shefferd Development Editor: Valerie Raymond Supplements Editor: Christine Ondreicka Assistant Editor: Jaclyn Castaldo Associate Managing Editor: Tracey Kuehn Project Editors: Dana Kasowitz. Cognitive psychology is the foundation for many other areas of social science. Practical Applications Practical implications of the field constitute another key incentive for the study of cognitive psychology. Cognitive psychology is the branch of psychology that studies internal mental processes such as memory, decision-making, attention, and perception. Behaviorism lost its hold as a dominant perspective and psychologists began to look more intensely at memory, learning, language, and other internal processes. How Do Psychologists Study Cognition? Cognitive psychologists rely on rigorous scientific methods to research the human mind. Cognitive psychology is the science of how the mind is organized to produce intelligent thought and how it is realized in the brain. This chapter introduces fundamental concepts that set the stage for the rest of the book by addressing the following questions: Why do people study cognitive psychology? Where and when did cognitive psychology originate? How do the cells in the brain process information? What parts of the brain are responsible for different functions?
